Following a systematic process that ensures industry-approved management and treatment of IT equipment, **IT Asset Disposition** provides the perfect complement to your value chain through our holistic suite of services from assessment, verification, recovery, refurbishment, reconfiguration to resale.

Adhering to stringent privacy, environmental and security regulations, we also offer certified data sanitisation and responsible disposal services for your retiring technology, helping you achieve greater corporate and environmental sustainability aligned to international standards.

CHANGING THE WAY

THE WORLD BUYS TECHNOLOGY

Optimising the value of your hardware

Through our all-encompassing eco-system for enterprise equipment, your recycled technology will be certified, packed with industry-standard materials and remarketed through our Hardware Resale's global distribution network for optimised returns.

Secure onsite and offsite data erasure services

We offer secure data sanitisation services that run on certified erasure software, either on-premise or offsite, with disk sanitisation reports provided upon completion for your peace of mind.

Compliant with industry standards

Our high quality and environmental standards such as the ISO 14001 Environment Management System certification*, are affirmed by globally-recognised organisations including the International Organization for Standardization (ISO) and Asset Disposal and Information Security Alliance (ADISA)*.

**ISO 14001 and ADISA accreditation only applicable in specific regions.*

One touchpoint for multi-platform requirements

Through a series of hardware diagnostic tests and sanitisation procedures conducted by our professional engineers, your equipment are harvested, recycled and refurbished to your needs.

CASE

STUDY

• Requirements •

Our client sought a trusted partner in Singapore that could handle end-to-end asset lifecycle management for both mid and high-end enterprise equipment like AIX servers, storage and Lenovo System X machines, as well as high volume products such as laptops, PCs and monitors.

• How we bring value •

Leveraged on our proven methodologies and multi-platform expertise to perform hardware diagnostic tests and secure sanitisation services for about 12,000 high volume products and enterprise systems over a 12-month contract.

Upon harvesting, recycled equipment were systematically inventoried, tagged, barcoded and stored in Procurri's secure storage facilities in Singapore.

Beyond providing almost 15% cost savings through our ITAD services, the client gained access to our global hardware resale platform to remarket their refurbished hardware for maximised returns.

Tapped on our engineering capabilities to reconfigure and assemble equipment, which were certified and packed with industry standard materials, ready for reuse or remarketing purposes.
